Description

Insoles for people with **longitudinal** and **transverse flatfoot**. They support the longitudinal arch.

Thanks to the use of arch supports, they have a beneficial effect on the spread of pressure in the front part of the sole. They amortise your feet and significantly **reduce** microshocks appearing when the heel touches hard surfaces. they are especially recommended for people who often stand or walk at work. The insoles are made of shaped material, latex foam with active carbon and sheep **leather**.
